THE PROBLEM WITH THE GENERAL CRYPTOASSETS INVESTMENT PRODUCTS

- Most products don't allow the user to be the holder (to maintain the custody) of their Bitcoins;
- Some products guarantees a fixed return on the initial investment;
- Given the aspects of the investment and the promises of great returns, most of these products are known scams – mostly built on the widely known 'Ponzi Scheme';
- This poses a great threat to the safety of the customer's asset.

HOW QUAN SOLVES THIS PROBLEM

- Quan's DAT platform is our service of Non-Custodial autonomous trading;
- We have a robust back-end infrastructure that allows you to start trading using only your API Keys from your chosen exchange¹ - we don't hold your Bitcoins;
- Our strategies are thoroughly backtested and mathematically sound – we are always seeking new alphas to guarantee that we stay ahead;
- We only make money if you make money.

¹until August 31st, we only support Bitmex. There's a risk associated with holding your funds on an exchange. Quan is not responsible for what happens to the exchange neither is responsible for any down time. You're the sole person that can access your funds, your API shall not allow withdrawals.avenir

TLDR

- We **DO NOT** hold any of your Bitcoins – that's your role;
- We **ONLY** need an API Key with rights to set and cancel order, **NOT** to withdraw;
- Our strategies are thoroughly tested;
- We only make money if you make money.
